CES SMART CITIES HACKATHON 2017

THE PROBLEM OF THE DAY

Cities around the world lack an easy and consistent way for security services or law enforcement to get a 'situational report' of the place.

WHAT IS A SITUATIONAL REPORT?

A recurring report filed by security/police to describe events or occurrences.

WHY DO THE REPORTS MATTER?

Reports filed capture on-the-ground incidents as they happened. This is important for the city in order to maintain law and order.

What makes these reports difficult are a few things –

- 1. Too many areas, not many policepersons – not all areas covered.*
- 2. Inconsistent use of language to report.*
- 3. Lack of actionable data and a centralized log of occurrences.*

NON
EMERGENCY
DIAL **311**

WHAT WE PROVIDE

A machine vision approach to make reporting easier and actionable.

North Las Vegas
POLICE

a city street filled with lots of traffic

Log of events described textually

Natural Language Explanation of scenarios
Data geotagged and logged centrally from all sources

A group of people are celebrating, with confetti falling around them. They are wearing party hats and have their arms raised. The background is a dark blue gradient.

WHY IS THIS AWESOME

Consistency of law enforcement

*Effectiveness of law enforcement, especially where police
cannot be/is not physically present*

Logged data actionable with relevant information captured.

MEASURING POLICY OUTCOMES

Using actionable data to manage security deployment.

Managing expectations and scenarios automatically.

- Situations of security, unrest, medical attention, crowds.

Data as a Service

THE TECHNICAL DETAILS

Custom machine learning/NLP and computer vision algorithms for auto-captioning live video streams.

IBM BlueMix Text-to-Speech to describe scenes.

GREAT TIMES ARE WAITING
